

PRODUCT TEARDOWN

Eureka by ALLEN

A Product Teardown

Moving from passive consumption to active mastery.

Prepared by Ashutosh Singh

· Product Manager Intern Assignment

WHAT IS EUREKA?

Education disguised as entertainment.

Core value proposition

Replaces whiteboard lectures with episodic, high-fidelity 3D storytelling to teach core STEM concepts.

The target user

Class 10 students disengaged by textbooks — motivated by visual narratives and game mechanics.

The core loop

Watch

Learn

Ace

0:03

2:43

THE ONBOARDING

High production value, low contextual activation.

The good

The opening cinematic is visually stunning and instantly sets a premium tone.

The flaw

Immediately after, a generic “Allow Notifications” prompt appears — with zero context on why it matters.

The result

Users likely tap “Don’t Allow,” crippling the app’s single most important re-engagement lever.

0:08

0:11

WHAT'S WORKING

Hooking users with streaks & stories.

Social proof

“Trending in Nearby Schools” is a sharp PLG tactic — it manufactures FOMO and local relevance.

1:05

Gamification engine

Syllabus %, badges & streaks tap the dopamine loops this demo already knows (Duolingo, Snapchat).

1:52

Streaks & leaderboards

“Active Champs” day-streaks turn study into a daily habit; episodes chunk daunting chapters.

5:02

WHAT'S NOT WORKING

The “Netflix illusion” adds cognitive load.

Passive architecture — the UX mimics streaming: great for browsing movies, wrong for structured study. The student must guess what's next.

Navigation friction — too many taps to reach practice: subject → chapter → enroll → “Ace” tab → launch test.

No “start here” — new users see an empty profile and 0% progress, but get no clear first-step call to action.

No in-context doubts — mid-lecture or mid-quiz there's no way to ask a quick question. A floating AI button / corner-swipe should solve doubts without leaving the screen.

THE BIG OPPORTUNITY

Proactive AI: from browsing to guided missions.

The problem

"Allie" is buried as a reactive tool — students open it only when they're already stuck.

The fix

Make Allie the proactive center of the app, not a help desk hidden in a tab.

The flow

On first login Allie asks "What are you struggling with?" → auto-builds a Daily Mission on the home screen.

The impact

Cuts time-to-value, kills browsing fatigue, turns a passive video library into a personal AI tutor.

PROPOSED

Today's Mission

Watch Ep.1 — Chemical Reactions

Take a 5-question quiz

Review 2 flagged doubts
