EDUCATION

Indian Institute of Information Technology (IIIT) Raichur – B.Tech, Computer Science & Engineering
Ashoka Junior College, Nashik – ISC (XII): **85%** | Ashoka Universal School, Nashik – ICSE (X): **91.8%**

2022 – 2026

SUMMARY

Founder and PM who takes AI products from user problem to shipped MVP: founded TrackPay (Rs. 10.5L IIT Madras grant) and led a 0-to-1 hiring MVP at Darwix AI. Writes full product cases (audit, RICE, north star, A/B plan); prototypes with engineers.

PRODUCT EXPERIENCE

TrackPay

Apr 2025 – Present

Founder | Agentic AI payments & personal-finance platform, pre-incubated at IIT Madras

thetrackpay.com

- Won a **Rs. 10.5L IIT Madras pre-incubation grant** for a multi-agent layer that tracks and automates money flow.
- Own the product end to end: ran user research and problem validation, prioritized the feature backlog into iterative MVP builds, and wrote the PRDs, success metrics and engineering hand-off.

Darwix AI

Mar 2026 – May 2026

Product Manager Intern | AI sales & hiring automation

[System design doc](#)

- Led the **0-to-1 MVP of an Omnichannel Sales Hiring platform** (Email, WhatsApp, AI Voice): defined product logic, designed candidate workflows and specified edge-case handling, driving **1,000+ automated calls** and **100+ high-quality leads**.
- Scaled the **Agentic AI Hiring Call** product to **5,000+ automated calls** and **300+ qualified leads**.
- Built investor pitch decks, pipeline reports and strategy docs used in fundraising and business development.

IIIT Raichur – Software Engineering Course

Aug 2024 – Dec 2024

Teaching Assistant | Product & agile practice for junior students

[Certificate](#)

- Delivered a lecture series on how products get built: product terminology, Agile/Scrum boards, SWOT and Notion workflows.
- Mentored a student team through their software project and served on the final-evaluation judge panel.

PRODUCT CASE STUDIES

Google Pay India – From payment app to money relationship (25-slide teardown)

[Case study](#)

- Found the gap: #2 UPI app (32.75% share) whose “Money” tab is mostly credit cross-sell (2 of 4 modules) and cannot answer “where did my money go?”; used the 30% UPI share cap and new 0.4% MDR to argue depth, not volume, is the lever.
- Audited 4 surfaces, built 3 proto-personas and a competitor benchmark vs PhonePe/Paytm; RICE-ranked 6 initiatives and sequenced 5 bets (auto-tags first as the data layer) into a Now/Next/Later roadmap with 5 concept redesigns.
- Defined north star **Money Actives** with 5 input metrics and 4 guardrails, a phased A/B and opt-in rollout plan, an assumption-labelled sizing model (~Rs. 5.2 Cr/yr per 1M Money Actives) and privacy guardrails for location and spend data.

YouTube Music – From replay machine to discovery engine (31-slide teardown)

[Case study](#)

- Ran a 7-screen heuristic audit (Nielsen scorecard, tap counts) backed by public user evidence; traced weak discovery to 5 root causes in an issue tree (replay-first Home, no discovery tab, no steering, un-aimable Samples, re-find friction).
- Prioritized 7 initiatives with RICE (Fresh Home 31.5 vs lossless 0.3), recommended a Discover-hub IA change *only* behind a 3-arm test with a 5% holdout, and designed concept mocks for Fresh Home, Discover hub, steering controls and History.
- Set north star **Weekly New-Favourite Listeners** with 6 guardrails, and 4 experiments with pre-registered decision rules.

Paytm UPI Core Redesign – Teardown & PRD

[Case study](#)

- Prioritized 3 retention and payment-success features in a PRD with edge cases; throttled (not removed) loan promos.

AI PRODUCTS BUILT

FinITR-AI – Multi-agent tax-filing assistant that flags income-tax notice risk before filing (B.Tech thesis)

[Thesis](#) | [GitHub](#)

- Kept the LLM out of arithmetic with a deterministic tax engine (accuracy **54.2%** → **94.0%**), gave a Critic agent veto power (hallucinations **18.4%** → **6.8%**), and chose offline execution over speed to protect salary data.
- Validated on a self-built 140-case benchmark vs prompted GPT-4o/Gemini baselines (70–74% accuracy, 23–27% hallucination).

Multi-Agent IPO Due Diligence System – GenAI research assistant for retail investors

[Live app](#) | [GitHub](#)

- Shipped a live app that reads 500+ page prospectuses and benchmarks peers (84%+ retrieval accuracy) in ~80 seconds.

LEADERSHIP & ACHIEVEMENTS

- **General Secretary, COSA, IIIT Raichur** (2024–25): led **20+ institute events** (avg. footfall 600+), owned a **Rs. 20M+ budget**.
- **Public Relations Secretary, IIIT Raichur** (2023–24): directed branding, outreach and media for **30+ events**.
- Amazon Challenge: Top 84 (2024), Top 129 (2025) | Reliance Scholar | JEE: top 5% of 1.2M+ | MHT-CET: 97.1 percentile
- Certifications: IBM Design Thinking Practitioner | Breaking into PM (GfG) | Agile Foundations (IIBA)

SKILLS

- **Product:** PRDs, user research, personas & JTBD, UX audits, RICE, roadmapping, north-star metrics, A/B tests, sizing, GTM
- **Technical & tools:** LLM agents (LangChain, LangGraph), RAG, Python, SQL, Streamlit | Notion, Jira, Figma, GitHub
